

QEO - TRUCKERCLOUD FAQ

TruckerCloud helps connect eligible cloud-based dash camera systems to QEO, enabling the quick receipt of accident alerts, event video, and related data. This supports faster claims response, stronger loss control, and improved visibility into serious events.

What is TruckerCloud?

TruckerCloud is an integration platform that connects with your existing cloud-based dash camera provider and sends immediate accident notifications and related event data to QEO. **It is NOT a dash cam.**

How do I know if my camera is compatible with TruckerCloud?

Visit <https://truckercloud.com/program/qeo> to view the list of cloud-based dash camera providers that have integrated with TruckerCloud. TruckerCloud is actively onboarding additional providers.

Is it mandatory to opt-in?

Yes. For insureds using an **eligible** cloud-based dash cam provider, opting in to TruckerCloud is required by QEO and is a condition of coverage. There is no cost to the insured. QEO absorbs all TruckerCloud fees. TruckerCloud allows QEO to receive video and accident data to support claims handling and safety efforts. Failure to complete or maintain the opt-in may impact binding, renewal, or continuation of coverage. For questions about eligibility or the opt-in process, contact your agent or the QEO underwriting team.

What benefits do I receive by opting in?

- Faster claim response and resolution
- Reduced false claims, downtime, and dispute delays
- Tailored loss control guidance using actual telematics insights
- Proactive safety reviews and performance feedback at no additional cost
- Stabilize future QEO insurance cost

We already report claims timely and provide video footage. Why do we need to participate?

Participation allows QEO to provide enhanced loss control support and faster claims response. Automatic reporting ensures no incident is missed, even when things get hectic on the road. It also provides easy access to footage, eliminating the risk of it being overwritten or replaced on SD cards. Please note, the insured remains responsible for reporting all claims and incidents to QEO within twenty-four (24) hours of occurrence, regardless of TruckerCloud participation.

How quickly is QEO notified after a crash?

Typically, QEO receives crash alerts within minutes of the incident through TruckerCloud's direct integration. This allows faster contact, faster claim setup, and faster support.

Will claims be filed for potential crash events that are not actually claims?

No. Every alert video is reviewed by a QEO team member before any claim action is taken. If it's not clear whether the event is a claim, QEO will reach out to the Insured first for clarification.

We are concerned about sharing proprietary telematics data.

Your data remains confidential between you and QEO. TruckerCloud simply provides visibility that allows QEO to better support your safety program and reduce loss exposure. We do not share, sell, or use your data for any external purposes.
