

- 1. What is NAVSync?** NAVSync is a commercial auto insurance option where your monthly premium is based on the actual miles you drive, rather than a fixed annual estimate.
- 2. How is NAVSync different from a traditional policy?** Traditional policies bill a fixed amount and reconcile mileage at audit. NAVSync charges per mile each month, reducing audit surprises and aligning insurance cost with business activity.
- 3. Who is eligible for NAVSync?** NAVSync is currently available for qualifying SmartFleet customers written with National Interstate, using approved telematics providers.
- 4. Which telematics providers are approved?** At launch, NAVSync supports Samsara and Motive. Additional providers will be added over time.
- 5. Do all vehicles need telematics?** Yes, every insured vehicle must have an approved telematics device and report mileage through the same provider for the entire policy term.
- 6. Can a customer switch telematics providers mid policy?** No, changing providers mid term is not allowed and would remove the policy from the NAVSync program.
- 7. Is a Data Sharing Agreement required?** Yes, a signed Data Sharing Agreement (DSA) is mandatory. It authorizes the insurer to receive mileage data directly from the insured's telematics provider.
- 8. How quickly does mileage data start flowing?** Once the DSA is signed and the telematics account is connected, mileage data typically begins flowing within 1–2 days. A monthly telematics usage report will be accessible through the NAV I.Q. portal; however, it will not be available until National Interstate has collected three months of data.
- 9. Is there a down payment or minimum premium?** There is no traditional down payment and no minimum annual or monthly premium. A 20% non-working deposit is collected at binding and will carry over to subsequent policy terms.
- 10. How does monthly billing work?** Mileage is calculated at the end of each monthly reporting period. An invoice is generated shortly after, and the amount is automatically drafted from the insured's payment method on file. AutoPay is required via NAV I.Q. Portal.
- 11. What happens if mileage data is missing?** If data is incomplete or missing, the insurer may temporarily estimate mileage and work with the customer to restore data flow. Persistent issues may result in removal from NAVSync.
- 12. Is there still an annual audit?** Yes, but it is primarily a mileage reconciliation, often comparing telematics data to IFTA records. Significant differences may result in an adjustment.
- 13. What are the main benefits of NAVSync?**
 - Premium aligns with actual driving
 - Fewer audit surprises
 - Improved cash flow during slow periods
 - Automated billing
 - Access to telematics insights and safety reporting
- 14. What is required to bind a NAVSync policy?** Standard bind documents plus a signed Data Sharing Agreement, enrollment in AutoPay via NAV I.Q. Portal, and successful connection of telematics account.
